

## Configuration required to “link” IAR & Mitsubishi M38223

Converting the file required a batch file with these lines in it and the executable ubr2sym.exe

```
copy *.dbg *.d31  
copy *.map *.lst  
ubr2sym %1.D31 -l %1.lst -s %1.SYM -h  
%1.HEX > ubrof.rep
```

The above workaround gets around the following Error message when loading a .695 file
